

NICK JOEL GOUEND

+1 437-992-9035 · Toronto, ON · jombbeh121@gmail.com · LinkedIn · Github · Portfolio

Professional Summary

- **Backend & AI Engineer** building agentic LLM workflows, hybrid vector/keyword retrieval, and observability-instrumented distributed backend services.
- Relocated to Canada in 2024; used Apr – Jul 2025 to complete NPower Canada's Data Analyst program, followed by an AWS Solutions Architect certification in Sep 2025.

Education

Master of Science in Computer Science, GPA:3.2/4 | University of Yaoundé I, Cameroon

Data Analyst | NPower Canada, Ontario, Canada

Apr 2025 – Jul 2025

Certifications

Build with Claude API | Anthropic

May 2026

AWS Solutions Architect Associate | AWS Certification

Sep 2025

Technical Skills

- **Agent & Workflow Engineering:** Anthropic Claude API, LangChain, LangGraph, Agent Orchestration, Agentic RAG, Prompt Engineering, Prompt Caching
- **Data, Vector & Observability:** Qdrant/Pinecone (Vector DB), PostgreSQL (pgvector), Redis (Semantic Caching), MongoDB, Embeddings, RAG Evaluation, Langfuse
- **Backend & Distributed Runtimes:** Node.js (Event-Loop, Worker Threads), Python (FastAPI, SQLAlchemy, AsyncIO), Distributed Systems, Microservices, Kafka (EDA), AWS (Lambda, SQS, EC2), GCP

Work Experience

Gatestone, Credit collection

Oct 2025 – Present

Full Stack Software Engineer (AI Systems)

Jan 2024 – Aug 2024

Wiconet, (*early-stage tech startup*)

- Architected an **Agentic RAG system** using **Python** and **LangGraph** to orchestrate LLM agents, combining **Qdrant** vector search with indexed **PostgreSQL** lookups.
- Developed an **observable inference layer** on **AWS** using **FastAPI** and **Redis** for semantic caching; achieved **99.9% uptime** via circuit breakers on external model APIs.

Full Stack Software Engineer

Sep 2021 – Jan 2024

Firesoftware, (*software development company*)

- Engineered a high-velocity **CI/CD pipeline** with **GitHub Actions** and **Docker**, adding Biome/ESLint linting and Vitest testing; cut pipeline execution time by **40%**.

Full Stack Developer

Nov 2018 – 2021

Freelance (Self-employed), (*Yaoundé, Cameroon*)

- Delivered a **Node.js**-based real-time conversational (chat) application end to end for a client engagement, from schema design through deployment.

Recent Projects

*Consult my online **portfolio** for more projects*

Ledger Lens, Double-Entry Ledger and Cited Contract Chat | Python, FastAPI, PostgreSQL, LangGraph, OpenAI, P

- Enforced **double-entry integrity inside PostgreSQL** (deferred constraint triggers, append-only history) behind an **idempotent FastAPI REST posting API**; a local 500-request, 50-client load test produced zero duplicates.
- Built a **LangGraph agent** over advisory contracts with forced tool routing and an answer gate requiring every number to appear in a cited source, traced per turn with **Langfuse**.
- Implemented **hybrid retrieval** (Postgres full-text plus Pinecone dense, rank fusion) behind a 30-case golden-set eval gate; local runs cut over-refusal from 14% to 0%.
